Remote Key Fob –
Factory-Programmed To Memory Position 1 –
Introduction

MODEL 2003 MY-ON
S-TYPE
VIN M45255-ON

Issue:

At the introduction of S-TYPE (facelift 2003 MY) VIN M45255, changes to the method of supplying the remote locking key fob will be introduced.

Currently, all remote locking fobs are not set to a memory position and the Dealer network must explain the programming process to owners at delivery. To aid this process, from VIN M45255, all S-TYPE vehicles will be delivered with one ignition key remote fob pre-programmed to memory position 1. An electrical tie strap attached to the plastic bag holding the ignition key identifies the pre-programmed remote key fob.
